```bash
npm uninstall @types/pdfjs-dist
```

4. Patch the TypeScript Definition (Temporary)

If the issue persists and you can't upgrade dependencies, modify the local type definitions as a temporary fix:

- Navigate to the `node_modules/pdfjs-dist/types/src/display/standard_fontdata_factory.d.ts` file.

- Change:

```typescript
_fetch(url: any): Promise<Uint8Array<any>>;
```

To:

```typescript
_fetch(url: any): Promise<Uint8Array>;
```

Similarly, update `stringToBytes` in `node_modules/pdfjs-dist/types/src/shared/util.d.ts`:

```arduino
```typescript
export function stringToBytes(str: any): Uint8Array;
```
```

Note: Avoid manual changes if possible, as they can be overwritten during updates. Consider patching using tools like `patch-package`.
